DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 37-49 and 63-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paine (US 5,335,711), and further in view of Attenhoper (US 833,150).

Paine discloses an apparatus for pouring molten metal comprising a crucible, a mechanical housing having a first and second chamber, a heater position adjacent the crucible, a stock of unmelted metal (figures).

However, Paine fails to disclose an upstanding first tube positioned within said crucible and having a first end located around said aperture and coupled to said bottom wall member and another second end that is closed, said first tube having at least one entrance for allowing the passage of molten metal from said crucible to said first tube; an upstanding second tube located within said first tube and having one end coupled to said bottom wall member and in fluid communication with said aperture and another end defining an inlet from said first tube, said second tube has a first cavity adapted for receiving a volume of molten metal therein; and a passageway extending along said second tube for the passage of the molten metal from said at least one entrance to said inlet.

Art Unit: 1725

Attenhoper discloses a dispenser with inner and outer tube for delivering water to another source. The water rises into an entrance tube, then exiting upon the highest point of the inner tube (figure). Attenhoper teaches the above differences for the purpose of eliminating any impurities in the water going to a cleaner source (page 1, lines 12-33).

Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to provide a dispensing mean as taught by Attenhoper, in Paine because this dispensing construction will eliminate impurities in the molten metal prior to introducing into the mold.

Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Len Tran whose telephone number is (571) 272-1184. The examiner can normally be reached on M-F, 8:30 - 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on (571) 272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
